

Gastrografin Mixtures (Oral & Rectal)

These mixtures are to be used with Gastrografin **37% Organically Bound Iodine** concentration.

Oral Mixture

CT: 25 mL of Gastrografin mixed into 4 cups (1 liter) of water.

To enhance the taste, you may add flavoring to the water such as Crystal Light or Tang, etc. Or you may substitute Gatorade in place of the water.

Fluoro: Adult oral dosage may range from 30 to 90 mL, depending on the nature of the examination and the size of the patient.

Infants and children less than 5 years- 30 mL are usually adequate.

Children 5 to 10 years- the suggested dose is 60 mL.

These pediatric doses may be diluted 1:1, if desired, with water, carbonated beverage.

NOTE: These flavorings may contain ingredients that your patient has a sensitivity to, if this is the case water without flavoring should be used.

Rectal Mixture

CT: 120 mL of Gastrografin mixed into 4 cups (1 liter) of water.

This mixture should be placed in an enema bag.

Gastrografin enema in fluoro: 240 mL Gastrografin diluted with 500 - 700 mL water mixed in a 1000 mL enema bag.

SBFT Mixture

Adults: 60 mL of Gastrografin undiluted.
